

Linux System Programming Assignment 6

Note :

1. Every assignment should be placed in separate folder
 2. Every folder of assignment contains
 - One file which contains our program
 - One makefile to compile our application
 - One readme file which contains description
 3. Every input should be accepted using command line.
-

1. Write a program which accept file name which contains data of all file. We have to print all file names whose size is greater than 10 bytes.
2. Write a program which create hole of size 1kb at the end of file.
3. Write a program which accept directory name and file name from user and create file in that directory.
4. Write a program which accept directory name from user and delete all such files whose size is greater than 100 bytes.
5. Write a program which accept file name from user and offset, remove all the data from that offset.
6. Write a program which accept directory name from user and create hole in file if size is less than 1kb & if it is greater than 1kb then truncate the remaining data.
